Living in a Nuclear World

From Fukushima to Hiroshima

Edited by **Bernadette Bensaude-Vincent**, University of Paris 1 Pantheon-Sorbonne, France, **Soraya Boudia**, Université de Paris, France and **Kyoko Sato**, Stanford University, USA

Series: History and Philosophy of Technoscience

The Fukushima disaster invites us to look back and probe how nuclear technology has shaped the world we live in, and how we have come to live with it. This volume tackles these historical and transnational questions by bringing together scholars from multiple disciplines (anthropology, history, STS) and countries (France, Japan, US), who analyze various local, national and transnational subjects, from atomic bomb survivors to national experts and global nuclear institutions. It presents a new perspective on nuclear history and politics by focusing on four interconnected themes: violence and survival; control and containment; denial and normalization, and memories and futures.
